	1794			
MAIL DATE	DELIVERY MODE			
04/30/2009	PAPER			

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/706,809	Applicant(s) SMITH ET AL.
	Examiner Elizabeth M. Cole	Art Unit 1794

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(o).

Status

1) Responsive to communication(s) filed on 25 February 2009.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 9-22 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 9-22 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
 3) Information Disclosure Statement(s) (PTO/SB/08)
 Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date _____
 5) Notice of Informal Patent Application
 6) Other: _____

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/25/09 has been entered.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamaoka et al, U.S. Patent No. 4,722,973 in view of Stehling et al, U.S. Patent NO. 5,382,631. Yamaoka discloses a thermoplastic elastomer composition comprising a blend of two polyolefins. One polyolefin is a hard (non-elastomeric) ethylene alpha olefin copolymer having a melt index of 0.01-100 g per cc and a density of 0.860-0.910 (see col. 6, lines 6-38) and the other is a soft (elastomeric) ethylene alpha olefin copolymer) having a density of 0.863 g per cc, (see example 1). The non-elastomeric component can be present in amounts of 10-90% by weight and the elastomeric component can be present in 90-10% by weight. Yamaoka et al teaches that the elastomeric component should have a peak temperature of 60-70 degrees C. See col. 7, lines 1-12. Yamaoka differs from the claimed invention because it does not specify that the composition can be formed into nonwovens and does not disclose the claimed molecular weight distribution.

. Stehling discloses ethylene polymer blends which may comprise components having a narrow molecular distribution. See col. 6, lines 8-col. 9, line 7. Stehling teaches that the narrow molecular distribution of the blend improves the properties of the blends. Therefore, it would have been obvious to one of ordinary skill in the art to have employed polymers which had a narrow molecular weight distribution as taught by Stehling in the blend of Yamaoka, in order to produce ordinary having improved properties as taught by Stehling. Stehling discloses that ethylene polymer blends can be formed into meltspun, (i.e. spunbond) and meltblown fabrics. See col. 23, line 38-col. 24, line 48. Spunbond fabrics comprise continuous filaments. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have employed the blend of Yamaoka to form nonwoven fabrics as taught by Stehling, in view of the art recognized suitability of elastomeric blends of ethylene polymers for use in forming such fabrics.

3. Applicant's arguments filed 2/25/09 have been fully considered but they are not persuasive..

4. Applicant argues that Yamaoka teaches a density of the elastomeric component which is lower than the claimed density. However, Applicant claims a density of "about 0.865 g/cm³ to about 0.889 g/cm³". Yamaoka teaches a density of 0.863 in example 1. Yamaoka does not teach a criticality of the density or teach away from using a higher density. It is reasonable to expect that a range of "about" 0.865 to "about" 0.889 would encompass a value of 0.863 and/or that a polyolefin having a density value of 0.863

would have about the same properties as a polyolefin having a density value 0.865, where the materials are otherwise the same. Therefore, the rejection is maintained.

5. Applicant also argues that Stehling teaches away from using rubbery polyolefins to make the nonwoven fabrics. However, Stehling teaches that blends of ethylene polymers can be formed into nonwoven fabrics. Therefore, to use the particular blend of Yamaoka for a purpose for which such blends are known would have been obvious to one of ordinary skill in the art. The use of a material for its known purpose to achieve a predictable result would have been obvious to one of ordinary skill in the art at the time the invention was made. The person of ordinary skill in the art looking at the teachings of Stehling and Yamaoka would have recognized that the material of Yamaoka would have been useful for forming nonwoven fabrics.

6. Applicant's amendment has overcome the 112 1st paragraph rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (571) 272-1475. The examiner may be reached between 6:30 AM and 6:00 PM Monday through Wednesday, and 6:30 AM and 2 PM on Thursday.

The examiner's supervisor Rena Dye may be reached at (571) 272-3186.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

The fax number for all official faxes is (571) 273-8300.
